

# Hydra Pen (Rechargeable)

Hydra Pen not only has the benefits that skin roller and micro pen have, But it also •  
has a built-in container that automatically applies serum/vitamin cocktails through  
the whole treatment, making it significantly easier for you to achieve the results  
you desire.

Hydra Pen uses sterile needles that cause controlled skin damage using the •  
needles.

As a natural reaction, the body wants to repair the damage. •

Growth factors are released and the skin begins to produce new collagen. •

# Hydra Pen (Rechargeable)

New capillaries are also formed in the skin. •

The result is a rejuvenation of the skin and an improvement of the skin's structure • and condition.

After the treatment, the skin's absorption capacity of nutrients and moisture • increases by at least 50% - with Hydra Pen you have also added optional nutrients through the whole treatment which will give you fantastic results.

# Hydra Pen (Rechargeable)

Hydra Pen can be used all over the body, including around sensitive and hard to reach areas such as around the eyes, lips and nose. •

With the Hydra Pen's ergonomic design and 2 different speed levels and adjustable needle lengths (0.25mm-1.0mm) which allows you to adapt the needles to different skin problems, use the shorter needles for more sensitive areas such as around the eyes and lips and the longer needles are used there the skin is thicker like the stomach and thighs. •

# Applications

- Repair and revitalize the skin.
- Reduces saggy skin, age spots, scarring (including acne scars), large pores and sun damage.
- Reduces deep wrinkles and fine lines.
- Restores the skin's natural and youthful luster.
- Reduces cellulite and stretch marks.
- 4-6 treatments are recommended every 4-6 weeks for optimal results.
- Many people see results already after the first treatment.
